

# Forest Governance e-Learning Series

A video e-learning series examining the importance of good governance for sustainable forest management.

## Presenting:

- ◆ The story of Nepal's four decades of community forest management.
- ◆ A case study on what constitutes quality forest governance.
- ◆ A project to develop a national standard for forest governance in Nepal.

## Learning Objective:

The know-how to lead a multi-level and multi-stakeholder participatory approach to develop and formalise a quality of governance standard.

# IGES Forest Governance e-learning videos:

- ◆ **Nepal's Community Forests: A story of good governance**
- ◆ **A Quality Standard for Forest Governance:**  
*Demonstrating a practical and participatory approach to develop a Quality-of-Governance Standard*

**Video 1** is a documentary style video that shares the benefits and good practices of Nepal's four decades of community forest management, which served as a basis for IGES's bottom-up approach to understanding what comprises quality forest governance.

**Video 2** is an instructional video that guides the audience through the seven step process applied by IGES and its partners to develop the forest governance standard for Nepal, and teaches how you may apply this multi-level and multi-stakeholder participatory approach to develop a quality of governance standard in your own work.

The importance of **good governance** in forest management.

how local communities and countries alike can **promote good governance and forest conservation** by developing a **quality of governance standard**.

a **multi-stakeholder and multi-step approach** to develop this standard.

Quality-of-governance standards for carbon emissions trading

Developing REDD+ governance through a multi-stage, multi-level and multi-stakeholder approach
