

# Materials & Resources for Green Buildings in Malaysia

**Ar. Dr. LIM YAIK WAH**

Associate Professor / Head of Department  
Department of Architecture  
Faculty of Built Environment and Surveying  
Universiti Teknologi Malaysia (UTM)

# Building Carbon Footprint

- Building industry generates as much as **30% construction waste**, and it is expected to reach 2.2 billion tons of waste annually worldwide by 2025.
- Building sector contribute to **39% of energy-related CO<sub>2</sub> emissions** globally.
- Demand of construction is expected to grow further especially in developing countries.
- Malaysia estimates the construction industry to expand by **10.3% per annum**.
- The industry demonstrates strong correlation with economic development (GDP).

# Building Carbon Footprint

## ISSUE

### Carbon Emission from Buildings

#### Building Sectors:

Graphic : <http://www.phorum.com/wp-content/uploads/2015/03/Carbon-Recycle-of-building1.jpg>  
 Desc. : Sustainable Energy Development Authority Malaysia (SEDA Malaysia)

Sustainability in building sector requires urgent attention throughout the entire **building lifecycle**, starting from pre-construction phase until operation and maintenance

# Materials & Resources (MR) in GBI

4	MR	MATERIALS & RESOURCES	
	<b>Reused &amp; Recycled Materials</b>		
	MR1	Materials reuse and selection	2
	MR2	Recycled content materials	2
<b>Sustainable Resources</b>			
	MR3	Regional Materials	1
	MR4	Sustainable Timber	1
<b>Waste Management</b>			
	MR5	Storage & Collection of recyclables	1
	MR6	Construction waste management	2
<b>Green Products</b>			
	MR7	Refrigerants & Clean Agents	2
			<b>11</b>

# Sustainable Low Carbon Material

- Materials that are environmentally friendly and reduce carbon emissions.
- Include recycled materials, natural materials, and materials that are carbon-negative.
- Examples: recycled wood, timber, bamboo, stone, recycled/ green concrete, natural materials, etc.
- Materials with low embodied carbon.
- Materials with green certification (e.g. MyHijau).

Bamboo

Green Concrete

*Image source: [www.worldconstructiontoday.com/](http://www.worldconstructiontoday.com/)*

# Timber as Sustainable Material

- Timber is a sustainable material in many respects:
  - **Renewable:** Timber can grow back
  - **Low carbon footprint:** Timber stores carbon until it's burned or deteriorates
  - **Energy efficient:** Timber requires less energy to process than other materials (low embodied energy)
  - **Recyclable:** Timber can be reused in other construction projects
- Timber is a **natural product** that gives people the feeling of being close to nature. It promotes a sense of **well-being**, which is crucial for places where people live and work.
